

PAINT BRUSH CLIP

ABSTRACT OF THE INVENTION

Paint brush clip (10) is for attaching a paint brush (90) to a bucket (80) without obstructing access to paint (95). Clip (10) includes body (30) with flat central portion (31), including magnet means (40). First prong (33) and second prong (34) are attached to body (30). Clip (10) mounts on upper rim (83) of a bucket (80) with body (30) in interior space of bucket (80), retained by compression of prongs (33,34) on outer surface of bucket. Ferrule (91) of brush (90) is removably attached to magnet means (40) and prevented from slipping by ridges (41). Handle (50) aids in removing clip (10) from bucket (80).
